

SAMPLE HOLDER

SHN-SHC

A converter is designed for holding and transmitting the proportional to input signal in isolated condition.

- Hold mode: The outputs will be hold at the point of this mode until the reset command initiated.
- External contact closure as the command.
- Capturing signals from a composite analyzer that performs alternately on each sample.
- 1 or 2 outputs are available from 1 input.
- Contains overvoltage protection circuit.
- Transformer isolation type.
